Recommendations

Install and test this new version in a development environment before using it in production. The development environment should match the production environment as closely as possible to achieve accurate test results. Any issues or open questions found during testing should be resolved before going to production.

When upgrading an existing integration, make sure that the customer-specific modifications are carefully transferred to the new version. An incomplete upgrade with an incorrect configuration or customization can result in unexpected or deviating behavior, up to and including complete loss of functionality.

XPLM strongly recommends including upgrade services to transfer the existing customer-specific modifications successfully to the new integration version. Contact support@xplm.com for an offer.
